

# The Internet of Things

The Internet is evolving, again. Every day, billions of people connect to the Internet through billions of devices – PCs, smartphones and TVs to name just a few. While the PC remains at the centre of this evolution, Internet connectivity is now embedded into cars, fitness equipment, factory robots and vending machines. This smarter, connected world has the potential to change how we live.

Here, Intel has produced a quick snapshot of how the number of connected devices has exploded since the birth of the Internet and the PC, as well as a glimpse forward to 2020. The Internet may already be huge, but it's about to get a lot bigger.

- Mainframes, PCs & Laptops
- Smart TVs
- Tablets
- Smartphones
- E-book Readers
- Smart Energy Meters
- Games Consoles
- Automotive

**31 billion devices** / **connected to the internet**
